Chinese tech powerhouse Baidu opens Seattle-area office, expanding its reach in AI and the cloud

BY TODD BISHOP on October 9, 2017 at 7:00 am

Baidu President Ya-Qin Zhang in the corner window of the company's new Seattle-area office, overlooking downtown Bellevue, Wash, (GeekWire Photo / Todd Bishop)

China's Baidu is opening an engineering office in the Seattle region, giving the Beijing-based Internet powerhouse an additional U.S. outpost to expand its reach in artificial intelligence and the cloud.

The new Baidu office in downtown Bellevue, Wash., is starting with a small team that includes the leaders of Kitt.ai, the Seattle-based artificial intelligence startup acquired by Baidu this year. Baidu's current space has room for as many as 40 people in the first year, depending on how quickly it's able to recruit top engineers.

Chinese tech giant Tencent is poised to be a leader in AI, says head of new Seattle research lab

BY TAYLOR SOPER on December 14, 2017 at 6:05 pm

f Share 60

in Share 11

Dr. Dong Yu spent nearly 20 years at Microsoft Research before taking a new job as the leader of Tencent's new Al research lab in Bellevue, Wash. (GeekWire photo / Taylor Soper)

Judging by one of the company's slogans — "Al in all" — it's clear that Chinese tech powerhouse Tencent sees giant potential for artificial intelligence.

Tencent, maker of the popular WeChat app, is betting big on Al, and the company's decision to open an AI research lab in the Seattle area is another example of this.

The lab, located on the sixth floor of the Plaza Center tower in Bellevue, Wash., is not quite open yet - GeekWire stopped by this week and saw construction ongoing. But Tencent already has 20 researchers in the area working on Al-related services and products. They will soon move into the permanent space and there are plans to grow the workforce. Tencent will also launch an "Explorers" program that sponsors Seattle-area graduate students to work with the company and its technologies.

Mercedes-Benz has tapped former Amazon software development manager Mike Dosenbach to lead a new engineering center in downtown Seattle that could employ up to 150 software engineers by mid-2019.

The German automaker's new engineering center, its sixth worldwide, will focus on cloud computing efforts, making sense of data collected from connected vehicles.

Uber opening Seattle engineering office, led by Isilon vet Tim Prouty

BY TODD BISHOP on March 3, 2015 at 10:42 am

f Share

Tweet in Share 101

It's confirmed: On-demand transportation company Uber is opening a Seattle engineering office, with plans to hire as many as 50 people or more this year.

The office will be started up by Tim Prouty, a University of Washington Computer Science & Engineering alum who was most recently a director of engineering at EMC's Isilon Storage Division, reporting to Paul Mikesell, an Uber infrastructure engineering director and another UW alum, according to a post

Tim Prouty will be starting up the new office for Uber.

this morning on the UW CSE News site.

"At Uber one of my primary goals will be to grow the team very rapidly from 0 to 50+ people this year, so we'll be working hard to make a splash in the Seattle technology community over the next few months," the post quotes Prouty as saying.

GeekWire first reported news of Uber's plans for the Seattle engineering office in December, based on a job post seeking an engineering manager in the city. We've contacted Prouty and the company for additional information on the work the office will be doing and the potential direction of the engineering efforts here.

Update: Uber released a statement from general manager Brooke Steger: "We are thrilled to announce the expansion of Uber's Seattle team. Seattle was one of Uber's first cities and we are excited to continue to generate jobs in the area by tapping into the city's impressive talent pool."

The company's jobs site currently lists openings in Seattle for its scalability engineering team. Prouty has been at Isilon since 2006, since long before the company was acquired by data-storage giant EMC.

Uber has a large majority of its engineers in San Francisco, and a few others scattered among New York City, Lithuania, and Bulgaria. The seven-year-old company, which is operating in 250 cities, last year opened a mobile development

Over 150 One-on-one Meetings organized for a full day of Business Development

Export Deals

16 Tracks and 149 Sessions organized. Most of the Japanese delegation went back with 2-3 good leads.

One-on-one Session on Friday is the most important part of the event. IFC usually first talk to the Japanese side what kind of innovation they are looking for and based on these feed back, we start the match making process. Some of these are made about week in advance while others are based on the Networking session, the day before.

Secret of Successful One-on-one Meeting

Millions in 30 min

Total revenue of our delegation is around \$200 Billion. None of them do business by half measure. If they work with you, soon the numbers go hockey stick. It just does not make sense for them to build up business that is less than \$10 million. They really want to work with you to create a \$100 million product line.

So, how to hack the one-on-one. Simple. Follow the 3 steps, here.

- 1. On the previous day, there is a meet up where the Japanese mega corps explain exactly what kind of innovations they are looking for and how they would like to do business. Just listen.
- 2. If you think you got it, go and meet them at the networking session and ask for an one-on-one session.
- Prepare your pitch geared towards what the Japanese side wants.

ワシントン州政府のインフラ投資を事業機会に

July 2017

On behalf of the citizens of Washington State, I want to welcome and thank you for your interest in this groundbreaking Japan-Washington State mission to develop innovation and artificial intelligence (AI).

I would also like to extend my gratitude to Innovation Finders Capital for their assistance in planning this mission. I hope you will find it to be an interesting and productive week.

Washington State is at the forefront of developing artificial intelligence and machine learning and their applications to industry, so we are pleased to be able to highlight the deep talent and entrepreneurial spirit that our state can offer to help businesses thrive in Washington and in Japan.

Washington State is home to one of the most robust Information and Communication Technology (ICT) sectors in the world. It supports nearly 200,000 jobs at 14,000 companies statewide. It is home to world-renowned brands and industry leaders including Amazon, Cray, F5, Inrix and Microsoft, as well as institutions such as the Allen Institute for Artificial Intelligence and the University of Washington, which are on the leading edge of developing artificial intelligence technologies.

Japan is one of Washington State's most valued partners in culture and commerce, and our historic relationship goes back more than a century. Many Japanese companies have already invested heavily in Washington and are actively doing business, and many Washington State firms - both large and small - have successfully established a presence in Japan.

Both Washington State and Japan have worked hard on the Memorandum of Cooperation that we signed in June 2016. The agreement signified the efforts of both parties to promote cooperative research and information exchange with the aim of expanding opportunities for technological and investment partnership in business and industry.

The future of the cloud, and the future of machine learning and AI are being created in Washington, and with Japanese partnership, together we will provide global leadership in these emerging fields.

Again, best wishes for a successful mission.

Very truly yours,

Jay Inslee

本年、国際協力銀行(JBIC)はワシントン州政府との間で、ワシント ン州のインフラプロジェクトへの資金調達に関する覚書を締結しまし た。

ワシントン州インフラプロジェクトにおいて、日本企業による投資等 を通じたビジネス拡大を一層促進するために、JBICとワシントン州政 府の業務協力関係を構築することを企図するものです。
